DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Kralowetz et al. (US 4,387,327).

Regarding claim 1, Kralowetz discloses an apparatus for creating a processing program used for a numerical control device, comprising:

fixed form program storage means for storing a plurality of fixed form programs including an undefined data portion and used to create said processing program (Col. 2, lines 33-38; Col. 2, line 68 – Col. 3, line 3); selection means for selecting one fixed form program from said fixed form program storage means (Col. 2, lines 33-38, it is inherent that the fixed program is stored in the computer); and input means for inputting data to the undefined data portion included in the fixed form program selected by said selection means (Col. 2, line 68 – Col. 3, line 3; Col. 3, lines 51-53), wherein the data is inputted to the undefined data portion in said fixed form program by means of said input means so as to create the processing program by using the fixed form program (Col. 2, line 68 – Col. 3, line 3; Col. 3, lines 55-57; Col. 4, lines 3-6).

Regarding claim 2, the same citations applied to claim 1 above apply as well for this claim. Kralowetz further discloses the program data stored in said program data storage means is read based on the data inputted to the undefined data portion included in said fixed form program by means of said input means (Col. 3, lines 55-56, i.e., based on input data the computer computes. Please note that the computer 1 comprises an arithmetic unit and an interpolator that would inherently include formulas; Col. 2, lines 33-38) and is replaced in another undefined data portion in the fixed form program so as to create the processing program (Col. 3, lines 56-67, the change point positions and end point positions correspond to the other undefined data portion). As for claim 3, the same citations applied to claim 1 above apply as well for this claim. Kralowetz further discloses formula storage means for storing a formula for determining program data used in said fixed form programs (Col. 2, lines 33-38; Col. 2, lines 53-58); the program data is determined with the formula stored by said formula storage means by using the data inputted to the undefined data (Col. 2, lines 53-58; Col. 2, lines 33-38, arithmetic unit and interpolator) ;

As for claim 4, symbols are provided within the fixed form program in order to identify the undefined data portion included in said fixed form program as the data to be inputted (Col. 3, lines 49, i.e., x, y,).

Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Munekata et al. (US 4,530,046).

Regarding claims 1-4, Munekata discloses reading and selecting NC data block (Fig. 17) that corresponds to the fixed program; the undefined portions correspond to

the G codes corresponding to X, Y, Z positions that are determined (Fig. 12). Please note that for drilling an NC block of data is read and thereafter is modified with the corresponding calculation of coordinates that correspond to the undefined data(Col. 11, lines 1-68).

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
